    Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                            Score

/note="Organ: leaf; Vector: RescueMu (engineered from pBlueScript backbone); Site_1: BamHI; Site_2: BglII;
RescueMu is a 4.9 kb, modified maize Mu transposon designed to allow plasmid rescue from total genomic DNA.
Mu elements insert preferentially into transcription units. For more information on RescueMu, go to the web site 'http://www.mutransposon.org/project/RescueMu/'. Grid V was grown at University of Arizona in 2003. DNA was extracted from leaf strips, double digested using BamHI and BglII, and ligated to form circular plasmids. DH10B

cloned, S' cloning site: Sfi A site GGCCATTACGGCC; S'
linker/adaptor sequence: 5.AAGCATGGTNATCAACGCAGAGTGCC;
3' cloning site: Sfi B site GGCCATGACGCAGAGTGCC;
1' inker/adaptor sequence: same as the priming sequence;
Average insert size: 2kb; For PCR insert analysis: Use
M13 Forward and reverse primers; Library Amplified;
Recombinants (inserte): 98%; Library complexity: Sx106;
Full-length construction (method): SMART, a Clontech
method The pooled tissue RNA was collected and used to
construct full length enriched cDNA library and also
served as template to synthesize complex first strand cDNA
probe. Two high density colony arrays were made from over
110K cDNA clones and hybridized with the probes. Low
intensity clones were selected as they represented rare
expressed clones. The hybridization intensities for all
clones span from 0 to 1.8 million counts and the low
abundant class ranged from 0 to 13,000."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       linker/adaptor sequence: same as the priming sequence;
Average insert size: 2kb; For PCR insert analysis: Use
M13 Forward and reverse primers; Library Amplified;
Recombinants (inserts): 98%; Library complexity: 5x106;
Full-length construction (method): SMARR, a Clontech
method The pooled tissue RNA was collected and used to
construct full length enriched CDNA library and also
served as template to synthesize complex first strand cDNA
probe. Two high density colony arrays were made from over
into CDNA clones and hybridized with the probes. Low
intensity clones were selected as they represented rare
expressed clones. The hybridization intensities for all
clones span from 0 to 1.8 million counts and the low
abundant class ranged from 0 to 13,000."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Primed; Priming sequence:

The invention relates to a HERG protein having a mutation compared to wild-type HERG, and is useful for developing products for the diagnosis, prevention and treatment of long QT (LQT) syndrome. The products and methods can be used for the diagnosis of subjects with LQT syndrome. They can also be used to screen for drugs for treating or preventing LQT syndrome. The HERG nucleic acids can also be used for gene therapy and HERG peptides can be used for gene therapy and

Claim 7; Page 72; 163pp; English.

New isolated mutant HERG nucleic acids, useful for developing products for the diagnosis, prevention and treatment of long QT syndrome.

WPI; 2000-195319/17.

                                                                                                                                        sequence. The invention is used to diagnose, prognose or treat an angiogenic disorder in a mammal, particularly a human. The disorder is particularly tumor vascularization, a retinopathy, rheumatoid arthritis, Crohn's disease, atherosclerosis, ovary hyperstimulation, psoriasis, endometriosis associated with neovascularization, restenosis due to
                                                                                                                                                                                                                                                                                The invention relates to a novel pharmaceutical composition active on angiogenesis comprising an endothelial cell nucleic acid whose expression is induced by an angiogenic factor and inhibited by an angiostatic agent or its complement or fragment, a polypeptide sequence encoded by the nucleic acid or its fragment, a molecule capable of inhibiting expression of the nucleic acid or a molecule which binds to the polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Tumor vascularization; retinopathy; rheumatoid arthritis; Crohn's disease; atherosclerosis; ovary hyperstimulation; psoriasis; endometriosis; restenosis; angioplasty; cicatrisation; peripheral vascular disease; hypertension; vascular inflammation; Raynaud's disease; aneurism; thrombophlebitis; ischemia; angina; myocardial infarction; chronic heart disease; cardiac congestion;
                             angioplasty, overproduction of tissue due to dicatrisation, a peripheral vascular disease, hypertension, vascular inflammation, Raynaud disease, aneurism, arterial restenosis, thrombophlebitis, ischemia, angina, myocardial infarction, chronic heart disease, cardiac congestion or

                                                                                                                                                       The invention relates to a novel pharmaceutical composition active on angiogenesis comprising an endothelial cell nucleic acid whose expression is induced by an angiogenic factor and inhibited by an angiostatic agent or its complement or fragment, a polypeptide sequence encoded by the nucleic acid or its fragment, a molecule capable of inhibiting expression of the nucleic acid or a molecule which binds to the polypeptide sequence. The invention is used to diagnose, prognose or treat an angiogenic disorder in a mammal, particularly a human. The disorder is particularly tumor vascularization, a retinopathy, rheumatoid arthritis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Crohn's disease; atherosclerosis; ovary hyperstimulation; psorias endometriosis; restenosis; angioplasty; cicatrisation; peripheral vascular disease; hypertension; vascular inflammation; Raynaud's disease; aneurism; thrombophlebitis; ischemia; angina; myocardial infarction; chronic heart disease; cardiac congestion;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      corresponds used in the

                      The invention relates to a novel inhibitor of angiogenesis comprising a active substance chosen from at least one of a nucleic acid molecule, a antisense nucleic acid molecule, a polypeptide or an antibody. The invention further comprises: an antisense nucleic acid sequence chosen from any of the sequences provided in the specification; preparation of the antibody comprising in vivo or in vitro immunisation of an immunocompetent animal cell, preferably of a vertebrate and most preferably of a mammal, with at least one of the polypeptide sequences chosen from a sequence provided in the specification; a mammalian expression vector comprising at least one antisense sequence chosen from the control of the polypeptide sequences of the specification; a mammalian expression vector comprising at least one antisense sequence chosen from the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              gene therapy; antisense gene therapy; tumour vascularisation; retinopathies; rheumatoid arthritis; Crohn's disease; atherosclerosis; ovarian hyperstimulation; psoriasis; endometriosis; restenosis; tissue granulation; peripheral vascular disorder; hypertension; vascular inflammation; Raynaud's disease; aneurism; arterial restenosis;

This polynucleotide sequence represents a primer used the second of the control of the 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       genetically modified cell, that over- or under-expresses a gene implicated in an angiogenic disorder, comprising inserting the vector from above into a mammalian cell; a genetically modified cell that over-expresses or under-expresses at least one gene involved in angiogenesis by a nucleic acid sequence chosen from any of ADP73049 to ADP73338, as if the antisense nucleic acid selection of above, or a fragment of any of these, preparation of a cell line that stably expresses an expression vector. The angiogenesis inhibitor has the following activities: antiangiogenic, angiogenesis stimulator, angiogenesis inhibitor, cytostatic, dermatological, antiarthritic, antirheumatic, antiporiatic, and cardiant. The novel nucleic acid molecules of the antiporiatic, and cardiant. The novel nucleic acid molecules of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              vasotropic; antirheumatic; antiarthritic; hypotensive; antianginal; antiinflammatory; cardiant; angiogenesis; thibitor; gene therapy; angiogenesis; endothelial cell; diagnosis; tumor vascularization; retinopathy; rheumatoid arthritis; Crohn's disease; atherosclerosis; ovary hyporstimulation; psoriasis; endometriosis; restenosis; ovary hyporstimulation; psoriasis; endometriosis; restenosis; angioplasty; cicatrisation; peripheral vascular disease; hypertension vascular inflammation; Raynaud's disease; aneurism; thrombophlebitis; ischemia; angina; myocardial infarction; chronic heart disease;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            antipportatic, and cardiant. The novel nucleic acid molecules of the invention may be used to treat disorders in gene therapy and antisense gene therapy. The nucleic acid sequences, proteins and antibodies as post of the therapeutic compositions are useful in treating a disorder of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a novel pharmaceutical composition active on CC angiogenesis comprising an endothelial cell nucleic acid whose expression CC is induced by an angiogenic factor and inhibited by an angiostatic agent CC or its complement or fragment, a polypeptide sequence encoded by the cucleic acid or its fragment, a molecule which binds to the polypeptide of inhibiting expression CC of the nucleic acid or a molecule which binds to the polypeptide complement. The invention is used to diagnose, prognose or treat an CC angiogenic disorder in a mammal, particularly a human. The disorder is CC particularly tumor vascularization, a retinopathy, rheumatoid arthritis, CC particularly tumor vascularization, a retinopathy, rheumatoid arthritis, CC endometriosis associated with neovascularization, restenosis due to CC angioplasty, overproduction of tissue due to cicatrisation, a peripheral CC vascular disease, hypertension, vascular inflammation, Raynaud disease, CC aneurism, arterial restenosis, thrombophlebitis, ischemia, angina, myocardial infarction, chronic heart disease, cardiac congestion or CC macular degeneration due to age or osteoporosis. This sequence CC corresponds to an antisense DNA sequence to a differentially expressed CC DNA used in the composition of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      invention may be used to treat disorders in gene therapy and antisens gene therapy. The nucleic acid sequences, proteins and antibodies as of the therapeutic compositions are useful in treating a disorder of angiogenesis chosen from: tumour vascularisation, retinopathies, rheumatoid arthritis, Crohn's disease, atherosclerosis, ovarian hyperstimulation, psoriasis, endometriosis associated with neovascularisation, restenosis due to balloon angioplasty, tissue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         from any of the sequences provided in the specification; preparation of the antibody comprising in vivo or in vitro immunisation of an immunocompetent animal cell, preferably of a vertebrate and most preferably of a mammal, with at least one of the polypeptide sequences chosen from a sequence provided in the specification; a mammalian expression vector comprising at least one antisense sequence chosen from an antisense nucleic acid provided in the specification; preparation of a genetically modified cell, that over- or under-expresses a gene implicated in an angiogenic disorder, comprising inserting the vector from above into a mammalian cell; a genetically modified cell that over-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ischaemia, angina, myocardial infarction, chronic neart disease, congestive heart disease, macular degeneration linked to age and osteoporosis. This polymucleotide represents a human antisense Difor the creation of an angiogensis inhibitor of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 granulation due to scarification, peripheral vascular disorders, hypertension, vascular inflammation, Raynaud's disease, aneurism, arterial restenosis, thrombophhebitis lymphadenopathy. lymphedema, ischaemia, angina, myocardial infarction, chronic heart disease,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              expresses or under-expresses at least one gene involved in angiogenesis by a nucleic acid sequence chosen from any of ADP73349 to ADP73338, as the antisense nucleic acid selection of above, or a fragment of any of these; preparation of a cell line that stably expresses an expression vector. The angiogenesis inhibitor has the following activities:
ds; gene; human; cytostatic; immunomodulator; neuroprotective; nootropic;
anorectic; antidiabetic; antimicrobial; antilipaemic; gene therapy;
vaccine; cancer; cachexia; Alzheimer's disease; Parkinson's disease;
                                                                                      Human gene of the invention NOV43b SEQ ID NO:999.
                                                                                                                                                                            ADH72103
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            antiangiogenic, angiogenesis stimulator, angiogenesis inhibitor, cytostatic, dermatological, antiarthritic, antirhemmatic, antiinflammatory, vasotropic, hypotensive, opthalmological, antipsoriatic, and cardiant. The novel nucleic acid molecules of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            antisense
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Antisense nucleic molecule useful as inhibitor of angiogenesis in treatment of angiogenic disorders, e.g., rheumatoid arthritis, atherosclerosis and endometriosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Colin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a novel inhibitor of angiogenesis comprising active substance chosen from at least one of a nucleic acid molecule, antisense nucleic acid molecule, a polypeptide or an antibody. The invention further comprises: an antisense nucleic acid sequence chosen
                                                                                                                                                                                                                                                                                                                                                                                                                                              Local
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ß
                                                                                                                                                                                                                                                                                                                                                                                                                       18;

                                                                                                                                                                                                                                                                                                                           polypeptide of the invention has cytostatic, immunomodulator, neuroprotective, nontropic, anorectic, antidiabetic, antimicrobial, and antilipaemic activity, and may have a use in gene therapy, and as a vaccine. The polypeptides are encoded by NOVX polynucleotides comprising any of the 303 fully defined nucleotide sequences given in the specification. The polypeptide is useful in the manufacture of a medicament for treating a syndrome associated with a human disease. The polypeptide, polynucleotide and antibody are useful in diagnosing, treating or preventing NOVX-associated disorders, e.g. cancer, cachexia, Alzheimer's disease, Parkinson's disease, obesity, diabetes, infectious diseases, metabolic syndrome X or dyslipidaemias. The nucleic acids are further used as hybridisation probes, in chromosome mapping, tissue typing, preventive medicine, and pharmacogenomics. The present sequence encodes a NOVX polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Alsobrook JP, Alvarez E, Anderson DW, Boldog FL, Casman Catterton E, Chapoval A, Crabtree-Bokor JR, Edinger SR, Ettenberg S, Gangolli EA, Gerlach VL, Gorman L, Gunthev Gusev VY, Herrmann JL, Ji W, Kekuda R, Li L, Liu X, w Maclachlan T, Malyankar UM, Mezick AJ, Millet I, Mishra Paddigaru M, Pana CEA, Peyman JA, Raha D, Rieger DK, Rothenberg ME, Sciore P, Shenoy SG, Shimkett Smitheon G, Spytek KA, Stone DJ, Vernet CAM, Voss EZ,

New isolated NOVX polypeptides and polynucleotides, useful for preventing, diagnosing or treating NOVX-associated disorders, osteoarthritis, obesity, atherosclerosis, cancer, Parkinson's 유 infections e.g. disease,

Claim 20; Page 100-101; 340pp; English

The invention relates to human NOVX polypeptides and the polynucleotides encoding them. The polypeptides, polynucleotides and antibodies that bind immunospecifically to the polypeptides are useful in the manufacture of a medicament for treating a syndrome associated with a human disease, preferably a NOVX-associated disorder. The sequences are useful for treating, and another of the sequences are useful for diabetes, obesity, infectious diseases (viral, bacterial, fungal, helminthic, and protozoal), anorexia, cancer, cardiovascular disorders (e.g. hypertension, atheroaclerosis), neurodegenerative disorders (e.g. hypertension). bind of a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     osteoarthritis, haematopoietic disorders, inflammatory skin disorders, asthma and various dyslipidemias. The nucleic acids and polypeptides may also be used as targets for the identification of small molecules that modulate or inhibit e.g. neurogenesis, cell differentiation, cell proliferation, haematopoiesis, wound healing and angiogenesis, and in the generation of antibodies that bind immunospecifically to NOVX substances for use in therapeutic or diagnostic methods. The nucleic acids are further used as hybridisation probes, and in chromosome mapping, tissue typing, preventive medicine and pharmacogenomics. Sequences ACA10111-ACA10156 represent human NOVX polynucleotides of the invention
                                                                                                                                                                                                                                                                                                                                                                                            03-JUN-2003;

New NOVX treating obesity,

polypeptides and nucleic acid molecules useful for preventing NOVX-associated disorders, e.g. cancer, diabetes, infection or and in chromosome mapping, tissue typing or pharmacogenomics.

Rastelli L;

Σ,

Example 43; SEQ ID

ö 997;

1880pp; English

The invention relates to a novel isolated polypeptide (NOVX). polypeptide of the invention has cytostatic, immunomodulator,

The polypeptides are encoded by NOVX polynuclectides comprising any of the 303 fully defined nucleotide sequences given in the specification. The polypeptide is useful in the manufacture of a medicament for treating a syndrome associated with a human disease. The polypeptide, polynucleotide and antibody are useful in diagnosing, treating or preventing NOVX-associated disorders, e.g. cancer, cachexia, Alzheimer's disease, Parkinson's disease, obesity, diabetes, infectious diseases, metabolic syndrome X or dyslipidaemlas. The nucleic acids are further used as hybridisation probes in chromosome mapping, tissue typing, preventive medicine, and pharmacogenomics. The present sequence encodes a NOVX polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human; NOVX; gene; ss; cardiomyopathy; atherosclerosis; hypertension; scleroderma; obesity; cancer; diabetes; haemophilia; graft-versus-host disease; AIDS; asthma; Crohn's disease; multiple sclerosis; infection; anorexia; cancer-associated cachexia; neurodegenerative disorder; Alzheimer's disease; Parkinson's disease;
                                                                                                                                                                                                                                                                                                                                                   01-MAY-2002;
                                                                                                                                                                                                                                                                                                                                                                               29-JAN-2004.

                                                                                                                                                                                                                        The invention relates to human NOVX polypeptides and the polynucleotides encoding them. The polypeptides, polynucleotides and antibodies that bind immunospecifically to the polypeptides are useful in diagnosing, treating or preventing NOVX-associated disorders such as cardiomyopathy, atherosclerosis, hypertension, scleroderms, obseity, cancer, diabetes, haemophilia, graft-versus-host disease, AIDS, asthma, Crohn's disease, multiple sclerosis, infections, anorexia, cancer-associated cachexia, neurodegenerative disorders (e.g. Alzheimer's disease or Parkinson's disease), haematopoietic disorders and wasting disorders. The polypucleotides are also used as hybridisation probes, in chromosome mapping and in tissue typing. The polypeptides are also useful as vaccines. This sequence represents a human NOVX polynucleotide of the

CC ADC3394) and the polypeptides they encode (ADC3089) and the polypeptides they encode (ADC3089) and the polypeptides they encode (ADC3089) and the polypeptide of the invention additionally encompasses expression CC vectors and host cells comprising a nucleic acid of the invention; the cell recombinant production of a polypeptide of the invention; and methods of polypeptides of the invention; and methods of polypeptides of the invention; and methods of cell revention further discloses methods of peventing, treating or cempound which binds to a polypeptide of the invention. The CC invention further discloses methods of peventing, treating or campiorating a medical condition; kits comprising polynuclectide probes continued the invention of compounds that modulate the cexpression or activity of the polynuclectide and/or polypeptide; and 767 CC contig sequences corresponding to the cDNA sequences of the invention (ADC31861-ADC3262) and the polypeptides encoded by the contigs (ADC32628 CC (ADC3394)). The nucleic acids and polypeptides of the invention are useful in diagnostics, drug screening, forensics, gene mapping, in the CC data and products dependent on DNA and amino acid sequences. They are contigned the responsible for genetic disorders or other treating diseases such as Parkinson's disease, Alzheimer's CC disorders, wounds, burns, ulcers, osteoporosis, autoimmune diseases or cancer. The nucleic acids may also be used as hybridisation probes or primers, and in the recombinant production of a protein. The polypeptides or cancer. The polypeptides or cancer. The polypeptides or cancer. The polypeptides or cancer. The nucleic acids may also be used as hybridisation probes or cancer. The nucleic acids may also be used as hybridisation probes or cancer. The nucleic acids may also be used as hybridisation probes or cancer. The nucleic acids may also be used as hybridisation probes or cancer. The nucleic acids may also be used as hybridisation probes or cancer. The nucleic acids may also be used as hybridisation and

                 ovarian cancer cells as compared to their expression in normal (i.e. non-cancerous) ovarian cells. The invention also relates to polypeptides encoded by the markers, antibodies that selectively bind to the polypeptides, a method of inhibiting ovarian cancer in a patient at risk of developing ovarian cancer involving inhibiting expression of a gene corresponding to a marker of the invention and a method of treating a patient affilicted with ovarian cancer comprising providing to cells of the patient an antisense oligonucleotide complementary to a marker of the invention. The markers are useful for assessing if a patient is affilicted with ovarian cancer, which involves comparing the level of expression of a marker in a patient sample and a normal level of expression of the marker in a patient sample and a normal level of expression of the expression levels indicates ovarian cancer. The level of expression of a marker corresponds to a secreted protein or to a transcribed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           are also useful in generating autimously, and as food supplements. The present sequence represents a specifical claimed human cDNA sequence of the invention. Note: The sequence dat this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel isolated nucleic acid molecules (markers) overexpressed in cancer cells as compared to their normal non-cancerous ovarian coused to characterize stage, grade, histological type of ovarian of the control of the

The presence of protein or protein fragment is detected using an antibody that specifically binds with the procein or protein fragment. Alternatively, the level of expression of the marker is assessed by detecting the presence of a transcribed polynucleotide which anneals with the marker or anneals with a portion of the polynucleotide comprising the marker, under stringent conditions. The marker is also used for monitoring the progression of ovarian cancer in a patient which involves detecting expression of the marker in a patient sample at a first point in time, repeating the method at a subsequent time and comparing the level of expression. The method is carried out using an ovarian tissue sample. A composition comprising a marker, polypeptide or antibody of the invention is used to treat ovarian cancer. This sequence represents a human ovarian cancer DNA marker of the
                        sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also use in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is
                                                                                                                                             The invention : sequences. (I)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             food

닭 S

This sequence encodes a human thrombospondin protein, BTL.012. A fragment of this protein, comprising a thrombospondin repeat domain, may be used to modulate angiogenesis at a site. The BTL.012 fragment may be used for diagnosing, preventing or treating a medical condition, particularly

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       aupplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     NOTE: This is a 'working draft' sequence. It currently consists of 21 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            8989

* NOTE: This is a 'working draft' sequence. It currently

* consists of 19 contigs. The true order of the pieces

* is not known and their order in this sequence record is

* arbitrary. Gaps between the contigs are represented as

* runs of N, but the exact sizes of the gaps are unknown

* This record will be updated with the finished sequence
